- We discussed some initial design aspects:
  - We learned via email from Susan (our sponsor) that the application should have a description field for fingerings, in addition to being able to display the notes associated with a fingering, and some example music.
- The plans for this weeks progress:
  - Sasha and Jacob will be looking into database setup and use in ruby on rails
  - Max will be getting the capstone website setup and running
- We spoke with Dr. Soule about copyright infringement questions posed by Susan.
  - He did not think it would be an issue, but we will continue to look into it.
- Max and Jacob also checked the status of our office/server.
  - The locks are being changed, and a new key is not ready.
